

Naskah Video — Delividence

All Things Agentic Hackathon (Google × Devpost) — kategori The Collaborative Partner

Target durasi: ~3:35 (batas keras 4:00) · **Bahasa:** English voice-over atau English subtitles ·

Deadline submit: 1 September 2026, 07:00 WIB

Catatan revisi (28 Agu 2026): naskah versi ini menggantikan draf lama yang masih menyebut konflik Friday/Monday, drift counter, dan revision-round counter/preference — ketiga fitur itu (Modul B/C/D) sudah **dilepas dari scope aplikasi** (lihat docs/10-KEPUTUSAN-DAN-VERIFIKASI.md §4b), jadi dihapus juga dari naskah. Semua beat di bawah bisa direkam langsung dari **production sungguhan** (delividence.vercel.app) — bukan simulasi/mock — jadi tidak perlu di-blur kecuali project identifier di GCP Console.

Update 29 Agustus 2026: partner (Irham) membangun ulang satu bagian sempit dari Modul B — *preference lintas-deal* untuk revision rounds — dan Rifqi menyetujuinya. Beat baru “Persistent preference” ditambahkan untuk itu; round-consumption/exhausted-round routing (bagian Modul B lainnya) tetap tidak dibangun dan tetap tidak disebut naskah ini.

0:00–0:12 Outcome dulu

VISUAL

Owner dashboard → ledger dengan citation dari Gemini → client confirm → baseline v1 aktif → evidence + Accept di delivery review → Proof Manifest.

VOICE-OVER

“Delividence turns a vague freelance brief into a shared, versioned agreement — every fact traced back to the client's own words, and every change classified before it's accepted.”

0:12–0:35 Masalah dan pembeda

VISUAL

Brief “modern, responsive, done Friday, a few revisions” dengan ambiguity markers.

VOICE-OVER

“A chatbot can rewrite this brief, but it cannot create shared state with the client, freeze an approved baseline, resume automatically when the client responds, or prove which acceptance criteria were actually met.”

On-screen text: Not a marketplace · Not legal e-signature · A two-party scope protocol

0:35–1:10

Handshake

VISUAL

Mulai dari analysis result yang sudah siap; upload/loading dipotong.

- **15 detik:** sorot ledger hasil ekstraksi Gemini — tiap field dengan kutipan verbatim dari brief, dan maksimal tiga pertanyaan klarifikasi yang readiness gate-nya terkunci sampai terjawab.
- **15 detik:** buka client portal (link tanpa akun) yang merangkum deliverable/timeline/out-of-scope; klien isi jawaban lalu tekan **Confirm project plan**.
- **5 detik:** jump cut ke owner dashboard; readiness, baseline v1, version, dan hash tampil.

VOICE-OVER

"Gemini extracts the deal ledger from the brief, but every quote is verified against the source text in code before it's shown. The plan only freezes once the client confirms it — and the same ADK workflow resumes through Pub/Sub the moment that happens."

1:10–2:00

Guardrail

VISUAL

Masukkan "Please also create three vertical TikTok visuals."

- Tampilkan Gemini mengusulkan classification `CHANGE_REQUEST` dengan citation otomatis (`agent.guardrail_agent`).
- Zoom citation ke approved deliverables/out-of-scope yang jadi dasarnya.
- Tampilkan freelancer confirm classification (bukan klien, bukan model).
- Jump cut: baseline v2 terbentuk; criterion lama yang sudah `ACCEPTED` tetap mempertahankan status dan versi aslinya (`introduced_in_version`), hanya criterion yang berubah ditandai `SUPERSEDED`.

VOICE-OVER

"The model cannot invent the boundary. A change is only labeled in-scope or a new request if it can be traced to an approved quote — without a valid citation, it drops to ambiguous automatically. The human always makes the final call, and it's logged as theirs."

2:00-2:40 Proof

VISUAL

Mulai dari evidence yang sudah terpasang ke criterion tertentu. Client memilih Accept dua dan Request changes satu (dengan alasan wajib diisi), lalu menekan satu tombol submit yang membuat satu review session. Jump cut ke `GET /runs/{id}/proof` — Proof Manifest lengkap.

VOICE-OVER

"Evidence is mapped to the exact criterion it supports. The client can accept some items and push back on others in a single submission, and the resulting Proof Manifest ties baseline, evidence, and every client decision together — exportable as Markdown."

On-screen disclaimer: `Defensible audit trail, not a certified legal signature`

2:40-3:00 Persistent preference

VISUAL

Owner buka pengaturan, confirm "2 revision rounds" sebagai preference default (`POST /preferences`). Buat deal kedua yang baru dari awal — tunjukkan ledger-nya sudah otomatis terisi `revision_policy.rounds_total = 2` dengan label **FREELANCER_POLICY** (bukan `ACCEPTED/CLIENT_STATED`).

VOICE-OVER

"A confirmed preference carries into the next deal automatically, but it's labeled as the freelancer's policy, not a client fact — it still has to go through the same client approval as everything else before it's binding."

3:00-3:25 Google Cloud proof

VISUAL

Architecture diagram, Cloud Run services (`delividence-api` , `delividence-worker`), Pub/Sub push delivery/log entry dengan job ID, Firestore baseline document. Blur project identifier di GCP Console bila perlu.

VOICE-OVER

"Delividence runs on Gemini through Google ADK, with Cloud Run, Firestore, and Pub/Sub. The client event shown here resumed this exact worker job in Google Cloud — not a local demo."

3:25-3:35 Penutup

VOICE-OVER

"Clear scope. Controlled change. Accepted work."

Aturan produksi video

- Rekam klip terpisah dan potong loading/waiting.
- Jangan mengetik panjang secara live; paste fixture.
- Jangan tampilkan login/setup.
- Gunakan zoom/callout untuk provenance, citation, version, dan cloud job ID.
- Target ~3:35 supaya ada ruang aman sebelum batas keras 4:00 (termasuk encoding/upload).
- Putar hasil final dari link publik dan perangkat lain.
